### PROFESSIONAL SUMMARY

---

I am an integrative molecular ecologist using genetic and genomic data to understand biodiversity, with a focus on invasive species. I combine fieldwork, common gardens, measurements of morphology and physiology, and genomics in invasive plants (e.g. sunflowers) and animals (e.g. *Anolis* lizards). My goal is to understand the introduction of invasive species, and the evolutionary mechanisms that facilitate their establishment and spread. I have a track record of interdisciplinary research and collaborations with academia and government.
